PHASE II ENVIRONMENTAL SITE ASSESSMENT

3005 PACKARD ROAD
ANN ARBOR, MICHIGAN

AKT PEERLESS PROJECT NO. 6588F-2-20

1.0 INTRODUCTION

On behalf of the Washtenaw County Treasurer, the Downriver Community Conference Brownfield Consortium (DCCBC) retained AKT Peerless Environmental & Energy Services (AKT Peerless) to conduct a Phase II Environmental Site Assessment (Phase II ESA) of a property located at 3005 Packard Street, Ann Arbor, Washtenaw County, Michigan (subject property). This Phase II ESA was conducted in accordance with (1) AKT Peerless' Proposal for a Phase II ESA (Proposal Number PF-10897), May 20, 2010 and AKT Peerless' July 19, 2010 Phase II Work Plan/Sampling and Analysis Plan (SAP), (2) AKT Peerless' Proposal for an Exploratory Test Pit Evaluation (Proposal Number PF-11208), August 24, 2010 and AKT Peerless' August 27, 2010 Phase II SAP, and (3) American Society for Testing and Materials (ASTM) Designation E 1903-97 *"Standard Guide for Environmental Site Assessments: Phase II Environmental Site Assessment Process."*

AKT Peerless' Phase II ESA report documents the field activities, sampling protocols, and laboratory results. AKT Peerless' Phase II ESA was performed for the benefit of DCCBC and the Washtenaw County Treasurer, whom may rely on the contents and conclusions of this report.

2.0 BACKGROUND

2.1 SITE DESCRIPTION AND PHYSICAL SETTING

The subject property is located in the southwest quarter of Section 2 in Ann Arbor (T.3.S/R.6.E), Washtenaw County, Michigan. The subject property is situated at the northeast corner of Packard and Platt Roads. It consists of an irregularly-shaped parcel that contains approximately 0.50 acres. The Washtenaw County Treasurer is the current owner of the subject property. The subject property's parcel identification number is 09-12-02-325-011.

Refer to Figure 1 for a topographic site location map. See Figure 2 for a site map with soil boring locations.

2.2 SUBJECT PROPERTY HISTORY AND LAND USE

Based on a review of available sources, the subject property has been developed for commercial use since at least 1937. The subject property was developed as a gasoline fueling/service station from at least 1957 (potentially as early as 1937) until approximately 1966, when the building was demolished. A new gasoline fueling/service station was constructed on the northeastern portion

of the subject property in approximately 1967. Three service bays were located within the building. In 1988, the subject building was remodeled into a convenience store and vehicle servicing activities ceased. In addition, gasoline dispenser islands were relocated at this time. Canopies were constructed over the dispenser islands located in the western and southern portions of the property in 1994. The subject property occupants continued to sell convenience items and operate a gasoline fueling station until early 2010, when the property was vacated. The Washtenaw County Treasurer obtained ownership of the property in April 2010 through tax reversion. The subject property has remained vacant and unused since. Previous property owners have included H&A Investment Co, Inc., South Street Investments, LLC, and Packard Mini Mart.

2.3 ADJACENT PROPERTY HISTORY AND LAND USE

East
The eastern adjoining property (3031 Packard Road) consisted of unimproved land from at least 1937 until between 1940 and 1949, when an apparent parking area was constructed. In 1960, a commercial building was constructed. This adjoining property has been occupied by a dry cleaner since 1960. The current occupant is Wash & Dry.

South/Southeast
The southern/southeastern adjoining property, beyond Packard Road (3000-3022 Packard Road), consisted of unimproved land from at least 1937 until between 1940 and 1949, when a multi-tenant commercial building was constructed. Occupants of this property have included Steven's Department Store, Kelsey's Super Market, H&R Block, J&W Painting, Clock Shop, Community Law Office, East Ann Arbor Hardware, Women's Choice Health Clinic, Clippindales, U&I Dry Clean, AA Advice, Ann Arbor City Place, etc. This adjoining property is currently occupied by Little Caesars, Bombay Groceries, Binh's Place, Makkara Sushi, Groom & Go, and K&K Cleaners.

Southwest
The southwestern adjoining property, beyond the intersection of Packard and Platt Roads (3050 Platt Road), consisted of unimproved land from at least 1937 until between 1955 and 1963, when a commercial property was constructed. Occupants of this building included Buster's Food M, Mr. Cash, Pronto Communications, and U-Hi Co. Independent. This building was demolished and a new commercial building was constructed in 2008. This adjoining property is currently occupied by Rite Aid Pharmacy.

West (from north to south)
This western adjoining property, beyond Platt Road (2976 Cascade Road), consisted of unimproved land from at least 1937 until between 1955 and 1963, when land disturbances (likely associated with the surrounding development activities) were evident. This adjoining property was developed with the Carleton Court Apartments in the mid to late 1980s.

This adjoining property, beyond Platt Road (2995 Packard Road), consisted of unimproved land from at least 1937 until between 1949 and 1955, when commercial development began.

Between 1963 and 1969 a gasoline fueling station was constructed. This adjoining property has continued this use and is currently occupied by BP.

North (from west to east)
This adjoining property (2881 Platt Road) consisted of a residential property from at least 1937 until 2003, when a medical/office building was constructed. This adjoining property is currently occupied by Azilia Westfall D.D.S (dental office).

This adjoining property (2898 Elmwood) consisted of unimproved land from at least 1937 until 1987, when a residential dwelling was constructed.

2.4 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

2.4.1 1994 Leaking Underground Storage Tank Incident

AKT Peerless contacted the Michigan Department of Natural Resources and Environment (MDNRE) Remediation and Redevelopment Division (RRD) Jackson District Office to review available records regarding environmental information or leaking underground storage tanks (USTs) associated with the subject property. AKT Peerless reviewed the following documents at the MDNRE RRD district office pertaining to the 1994 Leaking Underground Storage Tank (LUST) incident:

- Initial Abatement Report, dated September 24, 1994 by Envirologic Technologies, Inc. (Envirologic)
- Initial Assessment report, dated November 21, 1994 by Envirologic
- Free Product Report, dated November 21, 1994 by Envirologic
- Phase I Hydrogeologic Report, dated February 8, 1995 by Envirologic
- Phase II Hydrogeologic Work Plan, dated April 6, 1995 by Envirologic
- Final Assessment Report, dated August 28, 1997 by Fluor Daniel GTI, Inc.
- Closure Report, dated November 14, 1996 by Fluor Daniel GTI, Inc.
- Audit of Corrective Action, dated January 27, 1998 by Michigan Department of Environmental Quality (MDEQ) (currently the MDNRE)
- Letter in Response to Corrective Action Audit, dated June 29, 1998 by Fluor Daniel GTI, Inc.
- Audit of Corrective Actions, dated July 8, 1998 by MDEQ

Envirologic conducted a subsurface investigation at the subject property in 1994 as part of a UST removal and upgrade project (new USTs, piping, pumps). Three soil borings were advanced near the USTs located onsite at that time (6,000-gallon gasoline UST, 20,000-gallon dual compartmented gasoline UST, and a 1,000-gallon kerosene UST). Based on the field screening and analytical results, a confirmed release was reported on September 15, 1994.

As part of initial assessment activities, nine soil borings (SB-1 through SB-9) and one temporary monitor well were advanced at the subject property. Laboratory analytical results identified concentrations of petroleum contaminants above the former Michigan Environmental Resource

Act (MERA) Type B Cleanup Criteria. In addition, free phase kerosene was identified in soil borings SB-6 and SB-7 located near the kerosene UST. Between November 16 and 17, 1994, the gasoline and kerosene UST systems were removed. In addition, a total of 870 cubic yards of soil was excavated and disposed offsite from the two UST excavation areas. Confirmatory soil samples were collected from the two excavations identifying the presence of soil contamination above the MERA Type B Criteria. The current UST (20,000-gallon dual compartment gasoline) was installed at this time just west of the former 20,000-gallon UST excavation. In addition, a free product recovery well (RW-1) was installed in the kerosene excavation prior to backfilling with clean fill. Free product recovery occurred using a bailer. According the Free Product Recovery Report, one inch of product was observed and approximately 0.125 gallons was recovered.

Envirologic implemented a Phase I Hydrogeological Study on January 9, 1995, which included the advancement of five soil borings (MW-1, MW-2, MW-2D, and SB-10), the installation of groundwater monitoring wells, and soil and groundwater sampling. Soil laboratory analytical results indicated concentrations of benzene, toluene, ethylbenzene, xylenes (BTEX) were detected above MERA Type B Criteria, polynuclear aromatic hydrocarbons (PNAs) and methyl tert-butyl ether (MTBE) were detected below MERA Type B Criteria, and lead was detected below MERA Default Type A Criteria. Groundwater analytical results identified concentrations of BTEX and MTBE above MERA Type A Criteria and PNAs and lead below laboratory method detection limits (MDLs). Envirologic concluded that additional investigations were warranted to define the extent of BTEX and MTBE in groundwater. The MDEQ conducted an audit of the Study on February 15, 1997 and concluded the report to be adequate.

Envirologic submitted a Phase II Hydrogeological Work Plan to the MDEQ on April 7, 1995 proposing the advancement of 11 soil borings and the installation of 8 monitoring wells to further define the extent of impact at the subject property. In addition, according to the document, a total of 5.25 gallons of free product had been recovered as of April 7, 1995. The MDEQ concluded the Work Plan to be acceptable.

Fluor Daniel GTI, Inc. submitted a FAR to the MDEQ on August 28, 1997. According to the FAR, the advancement of 13 additional soil borings, the installation of 13 groundwater monitoring wells, and soil and groundwater sampling had occurred in 1997. According to the FAR, free product was not detected in the monitoring wells and the horizontal and vertical extent of BTEX and MTBE contamination had been defined in groundwater.

Fluor Daniel GTI, Inc. submitted a Tier I Unrestricted Residential Closure Report to the MDEQ on November 14, 1997. No additional investigation activities had occurred as part of the closure activities. According to the Closure Report, the extent of soil and groundwater contamination had been defined to the applicable Tier I Residential Risk Based Screening Levels (RBSLs) which included soil and groundwater Direct Contact Criteria. Volatilization to Indoor Air was not determined to be a relative exposure pathway based on the depth of groundwater (6 to 8 feet bgs).

The MDEQ conducted an Audit of Corrective Actions on January 27, 1998. The MDEQ did not concur with the conclusions of the Closure Report. Specifically, the report did not address

offsite migration or restrict the possible usage of impacted groundwater. MW-12 is located along the western property boundary and contained benzene at 1,400 parts per billion (ppb) and other gasoline constituents indicating contamination had migrated offsite. Information on file for the western adjoining gasoline fueling station, beyond Platt Road (2995 Packard Road) indicated contamination had not crossed the roadway. In addition, geology at the subject property consisted of interbedded clay and sand to approximately 18 feet bgs, where the sand layer could be utilized as source of drinking water.

Fluor Daniel GTI, Inc. prepared an amended Tier II Restricted Commercial III Closure Report in response to the MDEQ's audit of corrective actions. As part of the amended document, a Restrictive Covenant was filed for the subject property on March 16, 1998. The Restrictive Covenant indicates the following:

- Land use of the subject property shall be consistent with the Commercial III category;
- Soil shall not be removed from the property unless it is characterized;
- All workers who may come into contact with the groundwater must wear OSHA approved personal protective equipment;
- All concrete floors in the existing buildings located onsite must be adequately maintained to minimize the potential for vapor intrusion into the building from subsurface soils or groundwater;
- Construction of any buildings within the restricted area shall include the installation and maintenance of concrete floors or other barrier to vapor intrusion;
- Groundwater at the property cannot be used for potable or nonpotable purposes; and
- Installation of groundwater wells for any use other than monitoring quality is prohibited.

An audit of Corrective Actions was performed by the MDEQ on July 9, 1998. The MDEQ concurred that the corrective actions had been completed in accordance with Part 213 resulting in a Tier II Commercial III Closure with Institutional Controls.

2.4.2 January 2004 Phase I ESA, prepared by PM Environmental

PM completed a Phase I ESA of the subject property in January 2004 as part of a real estate transaction. PM identified the following RECs associated with the subject property:

- The possible former use of a heating oil UST associated with the former subject building.
- A possibility that orphan USTs installed prior to 1955 exists. Additionally, records pertaining to the removal of the 550-gallon and 1,000-galon USTs installed in 1966 were not identified.
- The potential for hazardous materials associated with the former automotive service station operations from at least 1967 until 1988 to have been discharged onto the ground or into an onsite septic system via floor drains.
- The unknown integrity of the former hoist system and the potential for underground reservoirs and hydraulic oil to have impacted the subsurface.
- The use of the current UST system and associated pumps islands since 1997 (actually 1994).

- The east and south adjoining properties are currently and/or have historically operated as dry cleaning facilities.
- The southwest adjoining property is listed as a registered UST site. No records were identified for this property by the MDNRE.
- A closed LUST site (3055 Packard Road) is located approximately 400 feet east of the subject property.

2.4.3 April 2004 Phase II ESA, prepared by PM Environmental

In April 2004, PM conducted an initial Phase II ESA of the subject property to address the RECs identified in their January 2004 Phase I ESA. The subsurface investigation consisted of (1) the completion of a geophysical survey around the perimeter of the subject building, (2) the advancement of five soil borings (which were all converted to temporary monitor wells, and (3) the collection of groundwater from six existing groundwater monitoring wells. Results of the Phase II ESA identified concentrations of contaminants similar to those identified in the 1997 Closure Report. The geophysical survey did not identify anomalies indicating the presence of orphaned USTs. However, AKT Peerless notes that the survey was conducted only around the perimeter of the subject building and did not include the remaining portions of the subject property.

2.4.4 October 2005 Phase I ESA Update, prepared by PM Environmental

PM completed a Phase I ESA Update of the subject property in October 2005 that identified the following RECs:

- Review of previous LUST closure activities indicates previous soil and groundwater samples collected for laboratory analysis were not analyzed for the current required gasoline parameters.
- No verification sampling was conducted in the areas of the former gasoline and kerosene pump islands to the west and south of the subject building.
- Review of analytical results from previous site investigations indicate soil contamination is not delineated to the east and south of PSB-5 and MW-3, and to the west of PSB-3, PSB-5, SB-10, SB-5, and MW-8 to the current Part 213 Tier I Soil Drinking Water RBSLs, which are the current Part 213 LUST closure requirements.
- Review of analytical results from PM's 2004 Phase II ESA indicates soil contaminant concentrations of xylenes were identified at PSB-5 above the current Part 213 Tier I Commercial III Soil Volatilization to Indoor Air Inhalation RBSLs and Soil Direct Contact RBSLs, and above the Part 213 Soil Saturation Concentration (Csat) Screening levels. No free product was observed in the temporary monitor well set at the boring location; however, the possibility exists for free product to exist near the area of PSB-5.
- Review of analytical results from previous site investigations indicates groundwater contamination is not delineated to the east of MW-11, MW-3 and MW-6, to the south of MW-6, MW-14, and MW-13, and to the west of MW-13, MW-2, MW-1, MW-8, MW-12, and TMW-3, to the current Part 213 Tier I Groundwater Drinking Water RBSLs, which are the current Part 213 LUST closure requirements.

2.4.5 May 2006 Baseline Environmental Assessment, Prepared by PM Environmental

PM completed an additional site investigation in May 2006 which included (1) advancing two soil borings, (2) installing one temporary monitor well, and (3) sampling 10 existing groundwater monitoring wells. Results of the investigation identified various concentrations of VOCs in soil and groundwater exceeding the MDNRE Part 213 Tier I Residential and Commercial III Drinking Water Protection, Soil Volatilization to Indoor Air, and Drinking Water RBSLs. Based on these results, the subject property meets the definition of a *facility* as defined in Part 201 of Natural Resources and Environmental Protection Act (NREPA), Michigan Public Act (PA) 451, 1994, as amended.

PM completed a Category S (same hazardous substance) Baseline Environmental Assessment (BEA) for the subject property on May 31, 2006 based on the results of PM's subsurface investigations. Tank tightness testing was conducted on the current UST system (Tank No. 5) on May 26, 2006. Results of the tightness testing indicated that the UST and product lines passed. Therefore, the UST system was used as an engineering control as an alternative approach for the BEA. In addition semi-annual groundwater samples were to be collected from up to six existing groundwater monitoring wells to distinguish existing contamination from a new release (unknown if this sampling was completed). The BEA was disclosed to the MDEQ on June 7, 2006. The MDEQ acknowledged receipt of the BEA on June 13, 2006.

2.4.6 July 2010 Phase I ESA, Prepared by AKT Peerless

On July 9, 2010, AKT Peerless completed a Phase I ESA of the subject property. AKT Peerless' Phase I ESA identified the following RECs in association with the subject property:

- **REC#1**: The subject property operated as an automotive service garage from at least 1957 (potentially as early as the 1930s) until between 1963 and 1966, when the original building was demolished. The current building was constructed in 1966 and continued operation as a service garage until approximately 1988, when the building was remodeled. Three service bays were formerly located in the subject building. This former use entailed the use and storage of petroleum products and hazardous materials/wastes and potentially former hoist systems. Drum imprints were observed to the north and east of the subject building. In addition, specific details pertaining to when municipal sewer service was connected to the subject property (prior to 1966) was not identified. Therefore, the potential for a septic system to have been utilized and/or abandoned at the subject property exists.
- **REC#2**: The subject property operated as a gasoline fueling station from at least 1957 (potentially as early as the 1930s) until approximately 2009/early 2010. This former operation entailed the use of a 1,000-gallon fuel oil (later converted to kerosene) UST, a 6,000-gallon gasoline UST, and a 20,000-gallon dual compartment gasoline UST. These USTs were removed in 1994. An "out-of-service" (reportedly empty) 20,000-gallon dual compartment gasoline UST and out of service dispenser islands are currently located on the western and southern portions of the subject property. Specific details pertaining to the current compliance status of the out-of-service UST was not identified.
- **REC#3:** A 550-gallon "slop oil" UST was installed at the northwest corner of the subject building in 1966. A drain line extended from the UST into the northern portion of the subject building. Soil borings have not been conducted in the area of this UST during previous

investigation activities. In addition, a 4,000-gallon gasoline UST was installed at the subject property 1959. Records of removal of these USTs and associated components were not identified. Furthermore, the potential exists for additional abandoned USTs (including a heating oil UST) to be present at the subject property. A geophysical survey was conducted around the perimeter of subject building in 2004 which did not identify the presence of abandoned USTs. However, the geophysical survey was not conducted throughout the entire subject property.

- **REC#4:** A confirmed release was reported for the subject property in 1994. Several investigation activities were conducted from 1994 through 1997 to address the confirmed release. The release was granted a Tier II Restricted Use Commercial III Closure in 1998. A Restrictive Covenant was filed for the subject property on March 16, 1998. Subsurface investigations were most recently conducted in 2004 and 2006 as part of a property transaction. Results of the previous subsurface investigation activities identified the presence of soil and groundwater contamination (gasoline related VOCs and PNAs) at the subject property above the MDNRE Part 213 Tier 1 Residential and Commercial III RBSLs. Based upon the presence of contaminants at concentrations above the applicable Part 213 Tier 1 Residential and Commercial II RBSLs, the subject property meets the definition of a *facility*. In addition, contamination appears to have migrated offsite to the west and south.
- **REC#5:** The eastern adjoining property (3031 Packard Road) may present an environmental concern to the subject property based on (1) the site has operated as a drycleaners since at least 1961, (2) a solvent UST was installed at the property in 1969 and was closed in place (specific detail pertaining to the closure was not obtained), (3) the building is located directly east of the subject property, and (4) soil borings/monitoring wells, with a full VOC scan, have not been conducted along the subject property boundary to address this adjoining operation of potential concern.

Because RECs were identified during the performance of the Phase I ESA, further investigation and/or assessment was recommended in order to determine the nature, extent, magnitude, and materiality of the REC associated with the subject property.

3.0 PHASE II ENVIRONMENTAL SITE ASSESSMENT ACTIVITIES

3.1 SCOPE OF ASSESSMENT

To further evaluate the RECs identified in AKT Peerless' July 2010 Phase I ESA, AKT Peerless conducted a subsurface investigation of the subject property that included: (1) the completion of a geophysical survey, (2) the advancement of 8 soil borings, (3) the installation of 3 temporary groundwater monitoring wells, (4) the collection of 8 soil samples and 3 groundwater samples from the soil boring locations, and (5) the collection of nine groundwater samples from existing groundwater monitoring wells. The following samples were submitted for laboratory analyses:

- Three soil samples for volatile organic compounds (VOCs), polynuclear aromatic hydrocarbons (PNAs), cadmium (Cd), chromium (Cr), lead (Pb), and polychlorinated bi-phenyls (PCBs).
- Three soil samples for VOCs, PNAs, Cd, Cr, and Pb.

- Two soil samples for leaded gasoline indicator parameters[1] and methyl-tertiary-butyl-ether (MTBE).
- Nine groundwater samples for leaded gasoline indicator parameters and MTBE.
- Two groundwater samples for VOCs, PNAs, Cd, Cr, and Pb.
- One groundwater sample for VOCs.

The following table summarizes each REC, the site investigation activities performed to address each REC, and the laboratory parameters used to address each REC.

Summary of AKT Peerless' Scope of Investigation

REC #	Environmental Concern	Investigation Activity	Analytical Parameters
REC 1	Hazardous substance use associated with automotive service operations conducted inside the subject building.	B-1, B-2, B-3, B-4W, B-5, B-6	VOCs, PNAs, Cd, Cr, Pb, PCBs, leaded gasoline indicator parameters, and/or MTBE.
REC 2	Historical utilization of fuel oil, kerosene, and gasoline UST systems at the subject property.	B-1, B-2, B-3, B-4, B-5, B-6, B-7, B-8, and sampling from 9 existing groundwater monitor wells	VOCs, PNAs, Cd, Cr, Pb, PCBs, leaded gasoline indicator parameters, and/or MTBE.
REC 3	Potential for abandoned used oil UST and/or gallon gasoline UST and additional USTs.	Geophysical survey, B-1, B-8	VOCs, PNAs, Cd, Cr, Pb, PCBs
REC 4	Previously identified soil and groundwater contamination stemming from regulated UST systems located at the subject property.	B-1, B-2, B-3, B-4, B-5, B-6, B-7, B-8, and sampling from 9 existing groundwater monitor wells	VOCs, PNAs, Cd, Cr, Pb, PCBs, leaded gasoline indicator parameters, and/or MTBE.
REC 5	The eastern adjoining property has operated as a dry cleaner since the early 1960s.	B-4, B-5	VOCs, PNAs, Cd, Cr, Pb

In addition, to evaluate the two anomalies identified during the geophysical survey, AKT Peerless oversaw the advancement of two exploratory test pits at the subject property. The following samples were submitted from the test pits for laboratory analysis:

- Six soil samples for VOCs, PNAs, and PCBs.

3.1.1 Geophysical Survey

On July 21, 2010, Geophysical Imaging, Inc. (GII) conducted a geophysical survey using electromagnetic (EM) induction and ground penetrating radar (GPR) over the entire subject property, except within the subject building. The purpose of the geophysical survey was to detect if underground storage tanks are present at the subject property.

[1] Leaded gasoline indicator parameters include: benzene, toluene, ethylbenzene, xylenes, trimethylbenzene isomers, ethylene dibromide, 1,2-dichloroethane, naphthalene, 2-methylnaphthalene, and lead.

The EM survey was conducted utilizing a GSSI EMP-400, which is equipped with a multi-frequency profiler with integrated GPS. The EM equipment was calibrated prior to conducting the survey. Strong anomalies identified during the EM survey were likely associated with the known aboveground interferences, including the subject building and other structures such as catch basins and light poles.

The GPR was conducted using a GSSI SIR-3000 GPR system with a 400-MHz dipole antenna mounted on a wheeled cart. Test scans were performed to calibrate the equipment prior to conducting the survey. The GPR survey was performed by making linear profiles spaced 2.5-feet apart. The survey identified four anomalies. One anomaly represents the known UST located in the western portion of the subject property. Two of which may represent abandoned USTs located in the northern and southwestern portions of the subject property and lastly, one anomaly that represents a former UST cavity (located to the south of the subject building).

Refer to Appendix A for a copy of the geophysical survey report by GII.

3.1.2 Soil Evaluation

On July 23, 2010, AKT Peerless advanced 8 soil borings at the subject property. AKT Peerless used hydraulic drive/direct-push (Geoprobe®) sampling techniques and followed the drilling procedures outlined in ASTM publication D 6282-98 "*Standard Guide for Direct Push Soil Sampling for Environmental Site Characterizations.*" AKT Peerless collected continuous soil samples from the soil borings in four-foot intervals to the maximum depth explored of 16 feet below ground surface (bgs). AKT Peerless personnel inspected, field-screened, and logged the samples collected at each soil boring location. Refer to Figure 2 for a site map with soil boring locations. Boring logs are provided in Appendix B.

3.1.3 Groundwater Evaluation

AKT Peerless encountered groundwater in 7 of the 8 soil borings advanced at the subject property. AKT Peerless installed a temporary groundwater monitor well at 3 of the 7 boring locations where groundwater was encountered. A one-inch PVC riser with a five-foot screen was utilized for each temporary groundwater monitor well. In addition, AKT Peerless sampled groundwater from 9 existing groundwater monitor wells at the subject property. Groundwater sampling was conducted using low-flow sampling methodologies described in the April 1996 United States Environmental Protection Agency (U.S. EPA) document Groundwater Issue titled "*Low-Flow (Minimal Drawdown) Groundwater Sampling Procedures.*" Stabilization data recorded for each well were documented in Low-Flow Sampling Logs included in Appendix C. Refer to Figure 2 for a site map with monitor well locations.

3.1.4 Test Pit/UST Evaluation

On September 2, 2010, AKT Peerless conducted oversight of the advancement of two test pits (Test Pit 1 and 2) at the subject property to further evaluate the anomalies identified during the geophysical survey conducted during this Phase II site investigation. During test pitting activities, two USTs were identified (one at each test pit location).

Test Pit 1

In Test Pit 1, located immediately north of the subject building, a 550-gallon slop oil UST was identified. The UST appeared to be in good condition with no noticeable holes or rusting. The UST was confirmed to contain an inert material (i.e. concrete and/or sand). According to property records, this UST was reportedly installed in 1966. The date the UST was "closed in place" could not be determined.

AKT Peerless collected four soil samples from beneath the 550-gallon slop oil UST. AKT Peerless submitted the soil samples for laboratory analysis of VOCs, PNAs, and PCBs.

Test Pit 2
In Test Pit 2, located in the southwester portion of the subject property, a 550-gallon UST was identified. The UST appeared to be in good condition with no noticeable holes or rusting. The UST was confirmed to contain an inert material (i.e. concrete and/or sand). The former contents, installation date, and the date the UST was "closed in place" could not be determined.

AKT Peerless collected four soil samples from beneath the 550-gallon UST. AKT Peerless submitted the soil samples for laboratory analysis of VOCs, PNAs, and PCBs.

Refer to Figure 5 for a map depicting the test pits locations. Refer to Appendix E for photographs taken during test pitting activities.

3.1.5 Deviations from the Sampling and Analysis Plan

This Phase II ESA was conducted under a U.S. Environmental Protection Agency (EPA) Brownfield Assessment Grant awarded to DCCBC. On July 19, 2010, AKT Peerless prepared a Phase II ESA SAP on behalf of DCCBC. On July 22, 2010, the SAP was approved by the EPA Region 5 Project Manager. In completing field activities, the following deviations from the approved SAP were made:

- AKT Peerless anticipated collecting groundwater samples from 10 existing permanent monitor wells located at the subject property; however, one of the previously identified nested well sets only had one monitor well instead of two. Therefore, AKT Peerless only collected and submitted nine groundwater samples for analysis from the permanent monitor wells.
- Groundwater in the B-4 and B-5 temporary monitor well locations was not sampled according to low-flow protocols due to low recharge volume.
- Insufficient amounts of groundwater were encountered at the B-4 temporary monitor well location. A sample was only collected and submitted for analysis of VOCs.

In addition, on August 27, 2010, AKT Peerless prepared a second Phase II ESA SAP regarding the test pit/UST evaluation. On August 31, 2010, the SAP was approved by the EPA Region 5 Project Manager. In completing field activities, the following deviations from the approved SAP were made:

- AKT Peerless conducted the advancement of two test pits (Test Pit 1 and 2) and in each test pit a 550-gallon UST was identified. The removal of these USTs was not required because it

was determined that both USTs were closed in placed and filled with an inert material (i.e. concrete and/or sand). Therefore, the USTs were left in place and soil samples were collected surrounding each UST for evaluation of residual soil impact.

3.2 QUALITY ASSURANCE/QUALITY CONTROL

To ensure the accuracy of data collected during on site activities, AKT Peerless implemented proper quality assurance/quality control (QA/QC) measures. The QA/QC procedures included, but were not limited to, (1) decontamination of sampling equipment before and between sampling events, (2) calibration of field equipment, (3) documentation of field activities, and (4) sample preservation techniques.

3.2.1 Decontamination of Equipment

During sample collection, AKT Peerless adhered to proper decontamination procedures. Sampling equipment was decontaminated using the following methods to minimize potential cross-contamination of soil and groundwater samples:

- Steam-cleaning or washing and scrubbing the equipment with non-phosphate detergent.
- Rinsing the equipment.
- Air-drying the equipment.

3.2.2 Calibration of Field Equipment

All field instruments were calibrated prior to first use on-site to ensure accuracy. Field instruments utilized during investigation activities at this subject property were a photoionization detector (PID), a water quality indicator meter (the meter measures pH, temperature, dissolved oxygen, conductivity and oxidation reduction potential), and a turbidity meter.

During AKT Peerless' Phase II ESA, a photoionization detector (PID) was used to screen all soil samples. The PID was maintained in a calibrated condition using 100 ppm isobutylene span gas prior to subsurface investigations.

The water quality indicator meter was used to measure indicator parameters during low-flow sampling conducted at the subject property. The meter was calibrated using known standards and in accordance with manufacturer specifications prior to first use on the subject property. The meter was designed to measure pH, temperature, dissolved oxygen, conductivity, and oxidation reduction potential.

The turbidity meter was used during low-flow sampling conducted at the subject property. The meter was calibrated using known standards and in accordance with manufacturer specifications prior to first use on the subject property.

3.2.3 Documentation of Activities

During AKT Peerless' Phase II ESA activities, subject property conditions (i.e. soil boring locations, weather conditions) were documented. AKT Peerless visually inspected the soil and groundwater samples and prepared a geologic log for each soil boring. The logs include soil

characteristics such as (1) color, (2) composition (e.g., sand, clay, or gravel), (3) soil moisture and water table depth, and (4) signs of possible contamination (i.e., stained or discolored soil, odors). Soil types were classified in accordance with ASTM publication D-2488 "*Unified Soil Classification System.*" All soil and groundwater samples were delivered to a laboratory under chain-of-custody documentation. See Appendix B for AKT Peerless' soil boring logs. See Figure 2 for site map with soil boring locations.

3.2.4 Sample Preservation Techniques

AKT Peerless collected soil samples according to USEPA Publication SW-846, "*Test Methods for Evaluating Solid Waste.*" Soil and groundwater samples were collected in laboratory-supplied containers, stored on ice or at approximately 4 degrees Celsius, and submitted under chain-of-custody documentation.

Soil samples collected for volatile analyses were field preserved with methanol in accordance with U.S. EPA Method 5035. Soil samples collected for PNAs and metals analyses were stored in unpreserved, 4-ounce wide-mouth jars.

Groundwater samples collected from temporary and permanent wells were collected with a peristaltic pump and dedicated tubing. Groundwater samples for volatile organic compound analyses were collected with zero headspace into 40 ml glass vials and preserved with hydrochloric acid. Groundwater samples for metals analyses were collected into plastic bottles and preserved with nitric acid. Groundwater samples collected for analysis of PNAs were collected into 1-liter amber glass jars.

3.2.5 QA/QC Sample Collection

AKT Peerless collected QA/QC samples for soil and water matrices in accordance with QA/QC sample procedures outlined in the "*Quality Assurance Project Plan (QAPP), Brownfield Assessment Program, Hazardous Substances and Petroleum Site Assessment Grant*, prepared for the DCCBC in 2009. The following tables describe the QA/QC samples collected for each matrix.

Summary of AKT Peerless' QA/QC Sampling – Soil Boring Activities

QA/QC Sample	Laboratory Analytical Parameter(s)	Matrix	Number of Samples
Field Duplicates	VOCs, PNAs, Cd, Cr, Pb	Soil	1
	VOCs, PNAs, Cd, Cr, Pb, leaded gasoline, and/or MTBE	Groundwater	2
Field Blank	VOCs, PNAs, Cd, Cr, Pb	Water	1
Equipment Blanks	VOCs, PNAs, Cd, Cr, Pb	Water	2
Matrix Spike/ Matrix Spike Duplicate	VOCs, PNAs, Cd, Cr, Pb	Soil	1
	Leaded gasoline + MTBE	Groundwater	1
Trip Blank	VOCs	Water	1
Methanol Blank	VOCs	Methanol	1

Summary of AKT Peerless' QA/QC Sampling – Test Pit/UST Evaluation

QA/QC Sample	Laboratory Analytical Parameter(s)	Matrix	Number of Samples
Field Duplicate	VOCs, PNAs, PCBs	Soil	1
Field Blank	VOCs, PNAs, PCBs	Water	1
Matrix Spike/ Matrix Spike Duplicate	VOCs, PNAs, PCB	Soil	1
Trip Blank	VOCs	Water	1

3.3 LABORATORY ANALYSES AND METHODS

AKT Peerless submitted 16 soil and 12 groundwater samples for laboratory analyses. The following table summarizes the location, depth, matrix, and laboratory analysis for each sample.

Summary of Laboratory Analyses

Sample Name/Depth **(in feet)**	**Matrix**	**VOCs**	**PNAs**	**Cd, Cr, and Pb**	**PCBs**	**Leaded Gasoline + MTBE**
B-1 (1-3)	Soil	☑	☑	☑	☑	-
B-1W	Groundwater	☑	☑	☑	-	-
B-2 (2-4)	Soil	☑	☑	☑	☑	-
B-3 (2-4)	Soil	☑	☑	☑	-	-
B-4 (1-3)	Soil	☑	☑	☑	-	-
B-4W	Groundwater	☑	-	-	-	-

TP-1 SS-2 4'	Soil	☑	☑	-	☑	-
TP-1 SS-3 4'	Soil	☑	☑	-	☑	-
TP-1 SS-4 4'	Soil	☑	☑	-	☑	-

Sample Name/Depth **(in feet)**	**Matrix**	**VOCs**	**PNAs**	**Cd, Cr, and Pb**	**PCBs**	**Leaded Gasoline + MTBE**
TP-2 SS-1 3’	Soil	☑	☑	-	☑	-
TP-2 SS-2 3’	Soil	☑	☑	-	☑	-
TP-2 SS-3 3’	Soil	☑	☑	-	☑	-
TP-2 SS-4 3’	Soil	☑	☑	-	☑	-

The laboratory analyzed the samples for: (1) VOCs in accordance with USEPA Methods 5035/8260B; (2) PNAs in accordance with USEPA Methods 3550B/8270C; (3) cadmium, chromium, and lead in accordance with USEPA Methods 3050B/6020, (4) PCBs in accordance with USEPA Methods 3550B/8082, and (5) leaded gasoline indicator parameters and MTBE in accordance with USEPA Methods 200.8 and 8260B.

4.0 EVALUATION AND PRESENTATION OF RESULTS

4.1 SUBSURFACE CONDITIONS

4.1.1 Soil and Groundwater Conditions based on Published Material

According to the Michigan Geological Survey Division’s publication, *Quaternary Geology of Southern Michigan*, soil in the area is end moraines of fine-textured till. This soil is described as gray, grayish brown or reddish brown, nonsorted glacial debris. The matrix is dominantly clay, clay loam, or silty clay loam texture, with variable amounts of cobbles and boulders. This soil occurs in narrow linear belts of hummocky relief marking former stillstands of ice-sheet margin and includes small areas of ground moraine as well as outwash. Soil thickness tends to be somewhat greater than adjacent ground moraine areas. Typically, end moraines of fine-textured till are associated with low to moderate hydraulic permeability and may allow the movement of contaminants through groundwater.

According to the USDA’s *Soil Survey of Washtenaw County, Michigan* (1977), soil at the subject property is classified as belonging to the Morley-Blount association. This soil is described as “*nearly level to steep, well drained to somewhat poorly drained soil that has a moderately fine textured and fine textured subsoil and moderately fine textured underlying material; on moraines and till plains.*” As indicated on Photo Sheet 33 of the soil survey, subject property soil is described as belonging to Nappanee silty clay loam, 2 to 6 percent slopes (NaB).

According to the USGS’ *Topographic Map of the Ypsilanti West Quadrangle*, which was published in 1967 and was photorevised in 1983, the subject property is situated between 800 and 820 feet above the National Geodetic Vertical Datum (NGVD). The subject property’s topography appears relatively flat with a slight decline to the west/northwest.

According to previous environmental investigations of the subject property, groundwater has been encountered at depths ranging from 6-13 feet below ground surface (bgs). Groundwater was previously encountered throughout the subject property.

Typically, the water table flows toward a major drainage feature or in the same direction as the drainage basin. The Swift Drain, which flows to the northeast toward the Huron River, is located approximately 1,500 feet southeast of the subject property; therefore, groundwater flow is anticipated to be in a northeasterly direction. According to previous environmental investigations, the lateral groundwater flow at the subject property is reportedly varied due to the presence of fill, UST system components, and subsurface utilities.

4.1.2 Soil and Groundwater Conditions based on Field Observations

During soil boring activities, AKT Peerless encountered an extensive clay formation that begins just below ground surface and extends to a maximum investigated depth of 16 feet bgs with laterally discontinuous layers of silt and sand encountered at varying depths. Fill sand was encountered in a former UST cavity.

The hydrogeology consists of a shallow, intermittent, groundwater bearing formation that is perched and/or trapped in some areas of the subject property. In other areas, saturated silt seams were encountered at depths of approximately 11.5 feet bgs. The saturated thickness of the groundwater bearing formation varies and ranges from six inches to at least 4.5 feet. The apparent water table varies between 3 and 13 feet bgs.

The subsurface soil at the property are consistent with the description of end moraines of fine-textured till as described in the *Quaternary Geology of Southern Michigan.* See Figure 2 for a site map with soil boring locations. See Appendix B for AKT Peerless' soil boring logs.

4.2 MDEQ RELEVANT EXPOSURE PATHWAYS AND APPLICABLE CRITERIA

4.2.1 Relevant Exposure Pathways

As defined in Michigan Public Act 451 Part 201, "relevant pathway" means an exposure pathway that is reasonable and relevant because there is a reasonable potential for exposure to a hazardous substance. The analysis of potential exposure pathways is based on known existing conditions at the subject property. The following subsections identify the relevant exposure pathways based on the subject property conditions observed.

4.2.1.1 Ingestion of Groundwater Pathway

Groundwater was encountered in seven of the eight soil borings drilled at the subject property. The groundwater appears to be hydraulically continuous across the subject property and have a saturated thickness ranging from six inches to at least 4.5 feet. A more detailed hydrogeological investigation would need to be completed to determine if the groundwater encountered at the subject property was in communication with and/or considered part of a usable aquifer. Since potable water is supplied to the subject property via a municipal source and there are no potable water supply wells on the subject property, the ingestion of groundwater is unlikely to occur. In addition, institutional controls placed on the deed of the subject property restrict the installation of potable water supply wells. However, for the purpose of determining if soil and/or groundwater contaminant concentrations exceed MDNRE Generic Residential Cleanup Criteria (GRCC) for the purpose of determining *facility* status, ingestion of groundwater at the subject property is a relevant exposure pathway.

4.2.1.2 Groundwater Venting to Surface Water Pathway

Groundwater Venting to Surface Water is not a human exposure pathway, but rather an exposure pathway based on aquatic toxicity. A storm water conveyance system is located in the western portion of the subject property and discharges to the closest surface water body. In addition, identified soil and groundwater impact is located in close proximity to the storm drain system. Therefore, hazardous substances in the groundwater are reasonably expected to vent to surface water bodies of the state above Groundwater Surface Water Interface Cleanup Criteria and groundwater venting to surface water is a relevant exposure pathway.

4.2.1.3 Groundwater Contact Pathway

Groundwater was encountered in 7 of the 8 soil borings drilled at the subject property. The apparent water table varies between 3 and 13 feet bgs. Therefore, groundwater contact is a relevant exposure pathway due to the shallow occurrence of groundwater.

4.2.1.4 Volatilization to Indoor Air Inhalation Pathway

Volatilization to Indoor Air Inhalation is a relevant exposure pathway.

4.2.1.5 Volatilization to Ambient Air Pathway

Volatilization to Ambient Air is a relevant exposure pathway.

4.2.1.6 Particulate Inhalation Pathway

Particulate Inhalation is a relevant exposure pathway.

4.2.1.7 Direct Contact Pathway

Direct Contact is a relevant exposure pathway.

4.2.2 Applicable Criteria

Applicable criterion means a cleanup criterion for a relevant pathway. A criterion is not applicable if the exposure pathway is not relevant. Based on the exposure pathway evaluation, the applicable pathways at the subject property include:

- Drinking Water Protection Criteria (DWP)/Drinking Water Criteria (DW);
- Groundwater to Surface Water Protection Criteria (GSIP)/Groundwater to Surface Water Criteria (GSI);
- Groundwater Contact Protection Criteria (GCP);
- Soil Volatilization to Indoor Air Inhalation (SVIAI)/Groundwater Volatilization to Indoor Air Inhalation (GVIAI);
- Infinite Source Volatile Soil Inhalation (VSIC);
- Particulate Soil Inhalation (PSI), and;
- Soil Direct Contact (DC)/Groundwater Contact (GC);

AKT Peerless compared the laboratory analytical data to the applicable Part 201 GRCC as published by the MDNRE RRD.

4.3 LABORATORY ANALYTICAL RESULTS

AKT Peerless collected soil and groundwater samples for the purpose of determining if the subject property meets the definition of a *facility*. Analytical results were compared with MDNRE Residential and Commercial I Generic Cleanup Criteria provided in MDNRE Remediation and Redevelopment Division's Operational Memorandum No. 1, Tables 1 and 2.

4.3.1 Soil Analytical Results – Soil Boring Activities

AKT Peerless submitted 8 soil samples for laboratory analysis of VOCs, PNAs, Cd, Cr, Pb, PCBs, and/or leaded gasoline indicator parameters and MTBE. The results of the laboratory analyses of the soil samples are summarized in the table below:

Summary of Soil Analytical Results

Soil Boring Location & Depth	Parameter	MDNRE Criteria Exceeded						
		DWP	GSIP	GCP	SVIAI	VSIC	PSI	DC
B-1 (1-3)	Xylenes	-	☑	-	-	-	-	-

Notes:
*- Sample identification: B-# indicates soil boring and (#-#) indicates sample depth in feet.
DWP – Drinking Water Protection Criteria
GSIP – Groundwater Surface Water Interface Protection Criteria
GCP – Groundwater Contact Protection Criteria
SVIAI – Soil Volatilization to Indoor Air Inhalation Criteria
VSIC – Volatile Soil Inhalation Criteria
PSI – Particulate Soil Inhalation Criteria
DC – Direct Contact Criteria

- Based on a review of the soil analytical results, cadmium, chromium, and lead were not detected in soil samples above MDNRE GRCC.
- PCBs were not detected above laboratory method detection limits in any of the soil samples submitted for PCB analysis.
- PNAs including benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, fluoranthene, phenanthrene, and pyrene were detected at the B-1 soil sample location above laboratory method detection limits and below MDNRE GRCC. Other PNAs were not detected above laboratory method detection limits.
- Contaminant concentrations of benzene, n-butylbenzene, ethylbenzene, and n-propylbenzene, were detected in soil sample locations above MDNRE DWP GRCC.
- Contaminant concentrations of ethylbenzene, naphthalene, 1,2,4-trimethylbenzene (1,2,4-TMB), and xylenes were detected in select soil sample locations above MDNRE GSIP GRCC.
- Contaminant concentrations of benzene were detected in the B-6 (4-6) soil sample location above MDNRE SVIAI GRCC.

Refer to Figure 3 for a site map with soil analytical results exceeding MDNRE GRCC. Refer to Table 1 for a summary of soil analytical results. Refer to Appendix D for a complete analytical laboratory report.

4.3.2 Groundwater Analytical Results

AKT Peerless submitted 12 groundwater samples for laboratory analysis of VOCs, PNAs, Cd, Cr, Pb, and/or leaded gasoline indicator parameters + MTBE. The results of the laboratory analyses of the groundwater samples are summarized in the table below:

Summary of Groundwater Analytical Results

Sample Location	Parameter	MDNRE Criteria Exceeded			
		DW	GSI	GVIAI	GC
MW-2	MTBE	☑	-	-	-
MW-4	MTBE	☑	-	-	-
MW-5	MTBE	☑	☑	-	-

GC – Groundwater Contact Criteria

- Groundwater sample analytical results indicate that contaminant concentrations of cadmium and lead were not detected above laboratory method detection limits.
- Contaminant concentrations of chromium were detected above laboratory method detection limits and below MDNRE GRCC in select groundwater samples collected at the subject property.
- PNAs were not detected in groundwater samples above laboratory method detection limits.
- Contaminant concentrations of benzene, ethylbenzene, MTBE, and n-propylbenzene were detected in select groundwater samples above MDNRE DW GRCC.
- Contaminant concentrations of benzene, ethylbenzene, MTBE, naphthalene, 1,2,4-TMB, 1,3,5-TMB, and xylenes were detected select groundwater samples above MDNRE GSI GRCC.

Refer to Figure 4 for a site map with groundwater analytical results exceeding MDNRE GRCC. Refer to Table 2 for a summary of groundwater analytical results. Refer to Appendix D for a complete analytical laboratory report.

4.3.3 Soil Analytical Results –Test Pit/UST Evaluation

AKT Peerless submitted 8 soil samples (four from each test pit) for laboratory analysis of VOCs, PNAs, and PCBs, The results of the laboratory analyses of the soil samples are summarized in the table below:

Summary of Soil Analytical Results

Soil Sample Location & Depth	Parameter	MDNRE Criteria Exceeded						
		DWP	GSIP	GCP	SVIAI	VSIC	PSI	DC
TP-1 SS-1 4’	Benzene	☑	-	-	-	-	-	-
	Ethylbenzene	☑	☑	-	-	-	-	-

Refer to Figure 5 for a site map with test pit locations and soil analytical results exceeding MDNRE GRCC. Refer to Table 1 for a summary of soil analytical results. Refer to Appendix D for a complete analytical laboratory report.

4.3.4 Quality Assurance/Quality Control Analytical Results

QA/QC samples were collected in accordance with AKT Peerless' *"Quality Assurance Project Plan (QAPP), Brownfield Assessment Program, Hazardous Substances and Petroleum Site Assessment Grant, Downriver Community Conference Brownfield Consortium"*, dated August 2009, revision 1. Based on a review of the analytical results of the QA/QC samples collected during the Phase II ESA, AKT Peerless did not identify conditions that would indicate errors arising from field sampling activities or laboratory procedures. Refer to Appendix D for a complete copy of the laboratory analytical report.

5.0 SUMMARY, CONCLUSIONS, AND RECOMMENDATIONS

5.1 SUMMARY OF ENVIRONMENTAL CONCERNS

On July 9, 2010, AKT Peerless completed a Phase I ESA of the subject property. AKT Peerless' Phase I ESA identified the following RECs in association with the subject property:

- **REC#1**: Hazardous substance use associated with former automotive service operations at the subject property.

- **REC#2**: Historical utilization of fuel oil, kerosene, and gasoline UST systems at the subject property.
- **REC#3:** Potential abandoned USTs at the subject property.
- **REC#4:** Previously identified soil and groundwater contamination stemming from regulated UST systems at the subject property.
- **REC#5:** The eastern adjoining property has operated as a dry cleaner since the early 1060s.

5.2 SUMMARY OF SUBSURFACE INVESTIGATION

On July 21, 2010 and July 23, 2010, AKT Peerless conducted a subsurface investigation at the subject property to further evaluate environmental concerns identified during previous environmental investigations. AKT Peerless' scope of work included the (1) completion of a geophysical survey, (2) the advancement of 8 soil borings, (3) the installation of 3 temporary groundwater monitoring wells, and (4) the collection of 8 soil samples and 12 groundwater samples for laboratory analyses. AKT Peerless submitted soil and groundwater samples for laboratory analyses of select parameters, including: VOCs, PNAs, Cd, Cr, Pb, PCBs, leaded gasoline indicator parameters, and/or MTBE.

In addition, on September 2, 2010, AKT Peerless conducted oversight of the advancement of two test pits (Test Pit 1 and 2) at the subject property to further evaluate the anomalies identified during the geophysical survey conducted during this Phase II site investigation. During test pitting activities, two 550-gallon USTs were identified (one at each test pit location) and were found to have been closed in place and filled with an inert material (i.e. concrete and/or sand). Soil samples were collected from beneath each UST for laboratory analyses. AKT Peerless submitted the soil samples for laboratory analysis of VOCs, PNAs, and PCBs.

5.3 CONCLUSIONS

AKT Peerless conducted soil and groundwater sampling in areas most likely to be impacted by contaminants based on the past use of the subject property. The results of the investigation indicate the following:

- GII conducted a geophysical survey using GPR over a portion of the subject property. The purpose of the geophysical survey was to detect if USTs were present at the site. The survey identified four anomalies. One anomaly represents the known UST located in the western portion of the subject property. Two of the anomalies may represent abandoned USTs located in the northern and southwestern portions of the subject property and lastly, one anomaly represents a former UST cavity (located to the south of the subject building).
- Contaminant concentrations of benzene, n-butylbenzene, ethylbenzene, and n-propylbenzene, were detected in soil sample locations above MDNRE DWP GRCC.
- Contaminant concentrations of ethylbenzene, naphthalene, 1,2,4-trimethylbenzene (1,2,4-TMB), and xylenes were detected in select soil sample locations above MDNRE GSIP GRCC.
- Contaminant concentrations of benzene were detected in the B-6 (4-6) soil sample location above MDNRE SVIAI GRCC.

- Contaminant concentrations of benzene, ethylbenzene, MTBE, and n-propylbenzene were detected in select groundwater samples above MDNRE DW GRCC.
- Contaminant concentrations of benzene, ethylbenzene, MTBE, naphthalene, 1,2,4-TMB, 1,3,5-TMB, and xylenes were detected select groundwater samples above MDNRE GSI GRCC.
- Two test pits were advanced at the property and two 550-gallon USTs were identified (one in each test pit). Both USTs were determined to have been closed in place and filled with an inert material (ie concrete and/or sand). Soil samples were collected from each test pit location and submitted for laboratory analysis. Analytical results of the soil samples indicated various constituents above MDNRE DWP and GSI GRCC.

Based on laboratory analytical results, the subject property meets the definition of a *facility*, as defined in Part 201 of the NREPA, Michigan Public Act (PA) 451, 1994, as amended.

5.4 RECOMMENDATIONS

AKT Peerless recommends any future owner(s)/operator(s) prepare a Baseline Environmental Assessment (BEA) report. Section 26(1)(c) of Part 201 provides certain liability protections to a person who becomes an owner or operator of a *facility* on, or after June 5, 1995 if they comply with both of the following, or unless other defenses apply: a BEA is conducted prior to or within 45 days after the earlier of the date of purchase, occupancy, or foreclosure, and the owner or operator discloses the results of the BEA to the MDNRE and subsequent purchaser or transferee.

In addition, because the subject property meets the definition of a *facility*, AKT Peerless recommends conducting a Section 20107(a) Compliance Analysis to assure compliance with Due Care obligations. Due Care obligations include:

- Undertaking measures to prevent exacerbation of existing contamination.
- Exercising due care by undertaking response activities to mitigate unacceptable exposure to hazardous substances, mitigate fire and explosion hazards due to hazardous substances, and allow for the intended use of the subject property in a manner that the protects health and safety.
- Taking reasonable precautions against the reasonably foreseeable acts or omissions of a third party and the consequences that could result from those acts or omissions.
- Provide notifications to the MDNRE and others in regard to mitigating fire and explosions hazards, discarded or abandoned containers, contamination migrating beyond property boundaries, as applicable.

6.0 LIMITATIONS

The information and opinions obtained in this report are for the exclusive use of DCCBC and Washtenaw County Treasurer. No distribution to or reliance by other parties may occur without the express written permission of AKT Peerless. AKT Peerless will not distribute this report without your written consent or as required by law or by a Court order. The information and

opinions contained in the report are given in light of that assignment. The report must be reviewed and relied upon only in conjunction with the terms and conditions expressly agreed upon by the parties and as limited therein. Any third parties who have been extended the right to rely on the contents of this report by AKT Peerless (which is expressly required prior to any third-party release), expressly agrees to be bound by the original terms and conditions entered into by AKT Peerless and DCCBC.

Subject to the above and the terms and conditions, AKT Peerless accepts responsibility for the competent performance of its duties in executing the assignment and preparing reports in accordance with the normal standards of the profession, but disclaims any responsibility for consequential damages. Although AKT Peerless believes that results contained herein are reliable, AKT Peerless cannot warrant or guarantee that the information provided is exhaustive or that the information provided by DCCBC and Washtenaw County Treasurer, or third parties is complete or accurate.

FOOTNOTES

FOR THE PART 201 CRITERIA/PART 213 RISK-BASED SCREENING LEVELS
RRD OPERATIONAL MEMORANDUM No. 1

(A) Criterion is the state of Michigan drinking water standard established pursuant to Section 5 of 1976 pa 399, mcl 325.1005.

(B) Background, as defined in R 299.5701(b), may be substituted if higher than the calculated cleanup criterion. Background levels may be less than criteria for some inorganic compounds.

(C) Value presented is a screening level based on the chemical-specific generic soil saturation concentration (C_{sat}) since the calculated risk-based criterion is greater than C_{sat}. Concentrations greater than C_{sat} are acceptable cleanup criteria for this pathway where a site-specific demonstration indicates that free-phase material containing a hazardous substance is not present.

(D) Calculated criterion exceeds 100 percent, hence it is reduced to 100 percent or 1.0E+9 parts per billion (ppb).

(E) Criterion is the aesthetic drinking water value, as required by Section 20120a(5) of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA).

(F) Criterion is based on adverse impacts to plant life and phytotoxicity.

(G) Groundwater surface water interface (GSI) criterion depends on the pH or water hardness, or both, of the receiving surface water.

(H) Valence-specific chromium data (Cr III and Cr VI) shall be compared to the corresponding valence-specific cleanup criteria.

(I) Hazardous substance may exhibit the characteristic of ignitability as defined in 40 C.F.R. §261.21 (revised as of July 1, 2001), which is adopted by reference in these rules.

(J) Hazardous substance may be present in several isomer forms. Isomer-specific concentrations shall be added together for comparison to criteria.

(K) Hazardous substance may be flammable or explosive, or both.

(L) Criteria for lead are derived using a biologically based model, as allowed for under Section 20120a(10) of the NREPA, and are not calculated using the algorithms and assumptions specified in pathway-specific rules.

(M) Calculated criterion is below the analytical target detection limit, therefore, the criterion defaults to the target detection limit.

(N) The concentrations of all potential sources of nitrate-nitrogen (e.g., ammonia-N, nitrite-N, nitrate-N) in groundwater that is used as a source of drinking water shall not, when added together, exceed the nitrate drinking water criterion of 10,000 ug/L. Where leaching to groundwater is a relevant pathway, soil concentrations of all potential sources of nitrate-nitrogen shall not, when added together, exceed the nitrate drinking water protection criterion of 2.0E+5 ug/kg.

(O) The concentration of all polychlorinated and polybrominated dibenzodioxin and dibenzofuran isomers present at a facility, expressed as an equivalent concentration of 2,3,7,8-tetrachlorodibenzo-p-dioxin based upon their relative potency, shall be added together and compared to the criteria for 2,3,7,8-tetrachlorodibenzo-p-dioxin.

(P) Amenable cyanide methods or method OIA-1677 shall be used to quantify cyanide concentrations for compliance with all groundwater criteria. Total cyanide methods or method OIA-1677 shall be used to quantify cyanide concentrations for compliance with soil criteria. Industrial-commercial direct contact criteria may not be protective of the potential for release of hydrogen cyanide gas. Additional land or resource use restrictions may be necessary to protect for the acute inhalation concerns associated with hydrogen cyanide gas.

(Q) Criteria for carcinogenic polycyclic aromatic hydrocarbons were developed using relative potential potencies to benzo(a)pyrene.

(R) Hazardous substance may exhibit the characteristic of reactivity as defined in 40 C.F.R. §261.23 (revised as of July 1, 2001), which is adopted by reference in these rules and is available for inspection at the DEQ, 525 West allegan Street, lansing, michigan. Copies of the regulation may be purchased, at a cost as of the time of adoption of these rules of $45, from the superintendent of documents, government printing office, washington, dc 20401 (stock number 869-044-00155-1), or from the dEQ, RRD, 525 West Allegan Street, Lansing, Michigan 48933, at cost.

(S) Criterion defaults to the hazardous substance-specific water solubility limit.

(T) Refer to the federal Toxic Substances Control Act (TSCA), 40 C.F.R. §761, subpart d and 40 C.F.R. §761, Subpart G, to determine the applicability of TSCA cleanup standards. Subpart d and subpart g of 40 C.F.R. §761 (July 1, 2001) are adopted by reference in these rules and are available for inspection at the DEQ, 525 West Allegan Street, Lansing, Michigan. Copies of the regulations may be purchased, at a cost as of the time of adoption of these rules of $55, from the superintendent of documents, Government Printing Office, Washington, dc 20401, or from the dEQ, RRD, 525 West Allegan Street, Lansing, Michigan 48933, at cost. Alternatives to compliance with the tsca standards listed below are possible under 40 C.F.R. §761 Subpart D. New releases may be subject to the standards identified in 40 C.F.R. §761, Subpart G. Use Part 201 soil direct contact cleanup criteria in the following table if TSCA standards are not applicable.

(U) Hazardous substance may exhibit the characteristic of corrosivity as defined in 40 C.F.R. §261.22 (revised as of July 1, 2001), which is adopted by reference in these rules and is available for inspection at the DEQ, 525 West allegan Street, Lansing, Michigan. Copies of the regulation may be purchased, at a cost as of the time of adoption of these rules of $45, from the Superintendent of Documents, Government Printing Office, Washington, dc 20401 (stock number 869-044-00155-1), or from the dEQ, RRD, 525 West Allegan Street, Lansing, Michigan 48933, at cost.

(V) Criterion is the aesthetic drinking water value as required by Section 20120(a)(5) of the NREPA. concentrations up to 200 ug/L may be acceptable, and still allow for drinking water use, as part of a site-specific cleanup under Section 20120a(2) of the NREPA.

(W) Concentrations of trihalomethanes in groundwater shall be added together to determine compliance with the Michigan drinking water standard of 80 ug/L. Concentrations of trihalomethanes in soil shall be added together to determine compliance with the drinking water protection criterion of 1,600 ug/kg.

(X) The GSI criterion shown in the generic cleanup criteria tables is not protective for surface water that is used as a drinking water source. For a groundwater discharge to the Great Lakes and their connecting waters or discharge in close proximity to a water supply intake in inland surface waters, the generic GSI criterion shall be the surface water human drinking water value (HDV) listed in the table in this footnote, except for those HDV indicated with an asterisk. For HDV with an asterisk, the generic GSI criterion shall be the lowest of the HDV, the WV, and the calculated FCV. see formulas in footnote (G). Soil protection criteria based on the HDV shall be as listed in the table in this footnote, except for those values with an asterisk. Soil GSI protection criteria based on the HDV shall be as listed in the table in this footnote, except for those values with an asterisk. Soil GSI protection criteria for compounds with an asterisk shall be the greater of 20 times the GSI criterion or the GSI soil-water partition values using the GSI criteria developed with the procedure described in this footnote.

(Y) Source size modifiers shown in the following table shall be used to determine soil inhalation criteria for ambient air when the source size is not one-half acre.

(Z) Mercury is typically measured as total mercury. The generic cleanup criteria, however, are based on data for different species of mercury. Specifically, data for elemental mercury, chemical abstract service (CAS) number 7439976, serve as the basis for the soil volatilization to indoor air criteria, groundwater volatilization to indoor air, and soil inhalation criteria. Data for methyl mercury, CAS number 22967926, serve as the basis for the GSI criterion; and data for mercuric chloride, CAS number 7487947, serve as the basis for the drinking water, groundwater contact, soil direct contact, and the groundwater protection criteria. Comparison to criteria shall be based on species-specific analytical data only if sufficient facility characterization has been conducted to rule out the presence of other species of mercury.

(AA) Comparison to these criteria may take into account an evaluation of whether the hazardous substances are adsorbed to particulates rather than dissolved in water and whether filtered groundwater samples were used to evaluate groundwater.

(BB) The state drinking water standard for asbestos is in units of fibers per milliliter of water (f/mL) longer than 10 millimicrons. Soil concentrations of asbestos are determined by polarized light microscopy.

(CC) Groundwater: The generic GSI criteria are based on the toxicity of unionized ammonia (NH3); the criteria are 29 ug/L and 53 ug/L for cold water and warm water surface water, respectively. As a result, the GSI criterion shall be compared to the percent of the total ammonia concentration in the groundwater that will become NH3 in the surface water. This percent NH3 is a function of the pH and temperature of the receiving surface water and can be estimated using the following table, taken from Emerson, et al., (Journal of the Fisheries Research Board of Canada, Volume 32(12):2382, 1975).

(DD) Hazardous substance causes developmental effects. Residential and commercial I direct contact criteria are protective of both prenatal and postnatal exposure. Industrial and commercial II, III and IV direct contact criteria are protective for a pregnant adult receptor.

(EE) The following are applicable generic GSI criteria as required by Section 20120a(15) of the NREPA.

(FF) The chloride GSI criterion shall be 125 mg/l when the discharge is to surface waters of the state designated as public water supply sources or 50 mg/l when the discharge is to the Great Lakes or connecting waters. Chloride GSI criteria shall not apply for surface waters of the state that are not designated as a public water supply source, however, the total dissolved solids criterion is applicable.

(GG) Risk-based criteria are not available for methane due to insufficient toxicity data. An acceptable soil gas concentration (presented for both residential and commercial/industrial land uses) was derived utilizing 25 percent of the lower explosive level for methane. This equates to 1.25 percent or 8.4E+6 ug/m3.

ID Insufficient data to develop criterion.

NA A criterion or value is not available or, in the case of background and CAS numbers, not applicable.

NLL Hazardous substance is not likely to leach under most soil conditions.

NLV Hazardous substance is not likely to volatilize under most conditions.

ug/Kg Micrograms per kilogram

ug/L Micorgrams per liter

NS Not sampled

BDL Below Laboratory Method Detection Limits

* Statewide default soil Background levels are relevant for all land uses and are substituted for the cleanup Criterion for a Hazardous Substance whenever the applicable risk-based criterion is lower than the statewide background level for that particular Hazardous Substance (R 299.5706a(5)(b), R 299.5707).

Farmington, Michigan 48336

Geophysical Survey Report
3005 Packard Road
Ann Arbor, Michigan

Dear Ms. Cory:

This letter report summarizes the results and interpretations of the geophysical survey performed for AKT Peerless Environmental Services (AKT) by Geophysical Imaging, Inc. (GII) at the above-referenced site. The purpose of the survey was to detect if abandoned underground storage tanks (USTs) are present at the site.

Project Background

According to AKT, the site was a former filling station. The status of USTs is unknown.

Field Activities and Data Processing

On July 21, 2010, a combined electromagnetic induction (EM) and ground-penetrating radar (GPR) survey was conducted by GII at the site in the accessible area designated by AKT. Figure 1 depicts the approximate area surveyed and the general site features. The EM survey was performed in "continuous survey" mode along 2.5-foot spaced transects. GII used a GSSI EMP-400 multi-frequency EM profiler with integrated GPS. Two EM exploration frequencies (9,000 Hz and 12,000 Hz) were selected for the site. Prior to the EM survey, field, operator, and zero in-phase calibration was performed at the site. In "continuous survey" mode, data are acquired at a fixed time interval while the operator walks along a survey line at a steady pace. Both in-phase (metal sensitive) and quadrature (terrain conductivity) measurements were acquired during the EM survey. These measurements were automatically stored in a wireless data logger, and later downloaded to a computer for subsequent processing. Two software packages were utilized to define suspect areas, MagMap (supplied by E.G. & G. Geometrics) and

SURFER (developed by Golden Software). Selected EM measurement contour maps are presented on Figures 2 and 3.

The GPR survey was performed along 5-foot spaced profiles. GII used a GSSI SIR-3000 GPR system with a 400-megahertz (MHz) dipole antenna mounted on a wheeled cart to scan the survey area. Several test scans were completed to observe the overall GPR responses to setup survey parameters prior to the GPR survey. A survey wheel was used to acquire distance-based data at the density of 18 scans per foot. Anomalous reflective objects/structures were noted and marked on the ground surface during the data acquisition. Additional linescans were performed to better understand anomalous targets. The GPR data were automatically stored in a data logger, and later downloaded to a computer for subsequent processing. The data processing consisted of Time-Zero Adjustment (time zero of the vertical scale aligned with the surface reflection) and Background Removal (horizontal banding) to the GPR scans. Targeted GPR linescans are presented on Figure 4.

Results and Interpretations

The EM survey identified a strong EM in-phase ('metal') anomaly located at the western central portion of the site. Three targeted GPR linescans (Linescans A, B, and C) were performed in this anomaly area. One hyperbolic reflection response was detected on GPR scans. The shape, strength and ring-down of these reflections are similar to the GPR response that is often observed over cylindrical-shaped steel objects such as USTs, large diameter metal pipes or cylindrical-shaped metal containers. Based on the EM and GPR data, this anomaly area was interpreted to represent a possible large UST. The EM survey identified a strong EM 'metal' anomaly located at the southwestern portion of the site. Two targeted GPR linescans (Linescans F and G) were performed in this anomaly area. Based on the EM and GPR data, this anomaly area was interpreted to represent possible UST/large diameter pipe. A moderate EM 'metal' anomaly was identified at the northwestern corner of the building. Two targeted GPR linescans (Linescans D and E) were performed in this anomaly area. Cylindrical-shaped steel object was not identified on the GPR scans. It is not uncommon for some large metal objects to be undetectable to GPR when highly conductive backfill materials are present over the target. Based on the EM data and site history, this anomaly area was interpreted to represent possible small UST/metal debris. A small area of strong EM 'metal' anomaly located near the northwest corner of the building was likely associated with shallow buried pipes/ small metal debris. Other EM anomalies identified during the survey were most likely associated with the known aboveground interference, such as pay phone, dispensers, metal cage, and guardrail. The GPR survey identified a backfilled excavation located near the southeast corner of the building. Two targeted GPR linescans (Linescans H and I) were performed in this anomaly area. More chaotic reflection response was identified on GPR scans. Based on the GPR data and site history, this area was interpreted to represent a possible UST cavity.

Survey Methods and Limitations

The EM operates by driving a transmitter coil with an AC current at audio frequencies to generate a sinusoidal time-varying magnetic field. A receiver coil is positioned on or near the surface of the earth some distance away from the transmitter coil. The transmitted time-varying magnetic field generated by the transmitter coil induces secondary currents to flow in the subsurface, which in turn generate a secondary (induced) magnetic field. Both the induced secondary field, along with the primary field, is detected and recorded at the receiver coil.

The EM instruments contain two sets of coils that are located within opposite sides of the tool. One set of coil is used to transmit a primary magnetic field, which generates electrical current in the ground. The created current then generates a secondary magnetic field, which is sensed by the coils in the receiver end of the instrument. Data is then collected on a control unit indicating the conductivity of the earth. The magnitude of the secondary field is broken into two orthogonal components. The two components of the secondary magnetic field are in-phase (real component) and the quadrature or out-of-phase (imaginary component). For instruments operating within the Low Induction Number (LIN) approximation, the magnitude of the quadrature component of the secondary field is linearly proportional to the apparent conductivity. The in-phase measurement is most sensitive to buried metallic objects and can be used locate buried steel reinforced structures, UST, large utility pipes, and other metallic targets. In the absence of a highly conductive material (e.g. metallic targets) in the subsurface, the magnitude of the in-phase component is dependant on the magnetic susceptibility of the subsurface. The EMP-400 allows multiple frequency measurements at each survey station. The depth of exploration depends on the operating frequencies, target size and shape, and host-target conductivity. Site conditions that can limit, even preclude EM data interpretation include: urban or developed areas, thunderstorms and nearby metallic objects at or above the ground surface such as parked vehicles near the survey stations, rebar concrete, metal siding, overhead power lines, metal fence/guard rail, and manhole covers, etc. Areas of a site that may be difficult or impossible to survey include: steep slopes, standing water areas, overgrown vegetation areas, and obstructed areas.

GPR operates by transmitting pulses of ultra high frequency radio waves (microwave electromagnetic energy) down into the ground through a transducer or antenna. When the transmitted signal enters the ground, it contacts objects or subsurface strata with different electrical conductivities and dielectric constants. Part of the ground penetrating radar waves reflect off of the object or interface; while the rest of the waves pass through to the next interface. The reflected signals return to the antenna, pass through the antenna, and are received by the digital control unit. The control unit registers the reflections against two-way travel time in nanoseconds (ns) and then amplifies the signals. The output signal voltage peaks are plotted on the GPR profile as different color bands by the digital control unit.

GPR waves with 400 MHz frequency typically can reach depths up to 12 feet below ground surface (bgs) in low conductivity materials such as dry sand or granite. Clays, shale, and other high conductivity materials or materials having high moisture, may attenuate or absorb GPR signals, greatly decreasing the depth of penetration to 3 feet bgs or less. Other site conditions that can limit even preclude GPR data acquisition and interpretation include: surface obstructions, uneven ground surface, standing water, cellular tower, rebar concrete, small or shallow buried objects, and over-grown vegetation, etc.

Conclusions

This geophysical survey has identified four anomalies, three of which may represent buried USTs. The geophysical results presented herein are interpreted. No warranty, certification, or statement of fact, either expressed or implied, regarding actual subsurface conditions within the surveyed area(s) is contained herein. If uncertainties exist regarding the presence of geophysical anomalies, test pit excavations should be conducted to explore the actual subsurface conditions. No interpretation of subsurface conditions can be made for areas not surveyed or paved with rebar concrete. Please note that the survey data reflect site conditions on the day of the field survey.

GII greatly appreciates this opportunity to provide AKT with our geophysical survey service. If you have any questions, please contact me at (419) 868-2902.

Sincerely,

Geophysical Imaging, Inc.

Ming He
President/Geophysicist

Report Summary

Lab Sample ID(s): S45025.01-S45025.32
Project: 6588F-2-20
Collected Date: 07/23/2010
Submitted Date/Time: 07/27/2010 08:00
Sampled by: Jeremy Fox
P.O. #:

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
"Not detected" indicates that parameter was not found at a level equal to or greater than the RL.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S45025.01-S45025.32
Project: 6588F-2-20
Submitted Date/Time: 07/27/2010 08:00
Sampled by: Jeremy Fox
P.O. #:

Report Sections

Report Flag Descriptions

*: QC result is outside of indicated control limits
W: Surrogate result not applicable due to sample dilution

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
"Not detected" indicates that parameter was not found at a level equal to or greater than the RDL.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories.

Report Summary

Lab Sample ID(s): S45567.01-S45567.13
Project: 6588F-4-20
Collected Date: 09/02/2010
Submitted Date/Time: 09/02/2010 15:15
Sampled by: Tom Szocinski
P.O. #:

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
"Not detected" indicates that parameter was not found at a level equal to or greater than the RL.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories.

Laboratory Certifications:
Michigan DNRE (#9956), Ohio EPA (#CL0002), NELAC NY (#11814), NELAC FL (#E871045), WBENC (#2005110032)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director
